

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 6 out of 7, which is the second-highest risk class. This rates the potential losses from future performance at a high level. Poor market conditions are very likely to impact your ability to sell your investment, although you may have to sell at a reduced price and the Company's share buyback facility may be withdrawn. This product does not include any protection from future market performance so you could lose some or all of your investment. Please see the Risks section of the Company's website at [www.bscfunds.com](http://www.bscfunds.com) for a more comprehensive range of risk factors.

### Investment performance information

The Company's portfolio currently comprises a broad range of sectors, with a mix of companies operating in traditional industries and those that offer opportunities in the development and application of innovation. The most prominent sector of the Company's portfolio is Data, which totals 29.0% of the portfolio by value; followed by Application Software (25.0%), Tech-enabled Services (18.0%) and Cloud and Dev Ops (9.0%).

The primary metric by which the Company assesses its performance is by reference to the Net Asset Value (NAV) Total Return, over periods of 1, 3, 5 and 10 years. Covering the period to 30 June 2024, the Company has generated Net Asset Value Total Returns of 4.5% (1 year), 6.0% (3 years), 10.1% (5 years) and 6.8% (10 years) respectively.

The annualised FTSE Small Cap movements over the same periods to 30 June 2024 are 10.4% (1 year), -2.9% (3 years), 3.8% (5 years) and 4.2% (10 years) respectively.

The Company targets the payment of a constant annual dividend. In each of the previous five financial years, the Company has paid regular dividends totalling 3.0 pence per share per year. In addition to this, across the previous five financial years the Company has paid cumulative special dividends totalling 7.75 pence per share.

### What could affect my return positively?

The NAV Total Return of the Company will predominantly be determined by the performance of the underlying investment portfolio. Positive performance of a portfolio company may result in the portfolio company achieving a higher valuation, positively impacting the Company's Net Asset Value. Positive performance of a portfolio company may also result in the Company's investment being realised for a value greater than the original price at which the Company acquired its interest in the portfolio company.

Investment valuations are typically determined by reference to the valuation of a basket of comparable companies, and as such, the Company's Net Asset Value may be impacted by the performance of these companies.

### What could affect my return negatively?

The share price of the Company's shares may not fully reflect their underlying Net Asset Value per share. The value of an investment in the Company, and the income derived from it, may go down as well as up and investors may not get back the full amount invested, even taking into account the available tax reliefs.

The Company will only pay dividends on shares to the extent that it has distributable reserves and cash available for that purpose. A reduction in income received, or in capital gains realised, from the underlying portfolio companies may adversely affect the dividends payable.

Although the Company's shares have been admitted to the Official List and are traded on the London Stock Exchange's market for listed securities, the secondary market for VCT shares is generally illiquid.

The disposal of new shares in the Company within five years of their issue will result in some or all of the 30 per cent income tax relief available on investment becoming repayable.

### What happens if the Company is unable to pay out?

As a shareholder of the Company you would not be able to make a claim to the Financial Services Compensation Scheme about the Company in the event that it is unable to pay out.

### What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early exit penalties. The figures assume you invest £10,000. The figures are estimates and may change in the future.

### Costs over time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

| Investment: £10,000<br>If you cash in after... | 1 year | 3 years | 5 years |
|--|--------|---------|---------|
| Total Costs (£)                                | £664   | £1,611  | £3,000  |
| Impact on return (RIY) per year (%)            | 6.64%  | 4.42%   | 3.97%   |

### Composition of costs

The table below shows:

- the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period;
- the meaning of the different cost categories.

| This table shows the impact on return per year |                             |       |   |
|--|-----------------------------|-------|---|
| One – off costs                                | Entry costs                 | 0.69% | This product charges 3.0% on the purchase of new shares.  |
|  | Exit costs                  | 0.00% | This product does not charge any exit fees  |
| Ongoing costs                                  | Portfolio transaction costs | 0.27% | The impact of the costs of the Company buying and selling underlying investments for the product  |
|  | Other ongoing costs         | 2.09% | The impact of the costs that we take each year for managing your investments (e.g. Depositary fees)   |
| Incidental costs                               | Performance fees            | 0.92% | A performance fee is payable to the Company's Investment Manager, YFM Private Equity Limited (95%), and Chord Capital (5%). The performance fee is 20% of the amount by which the average mid-market share price over the five dealing days prior to 31 December, plus the cumulative dividends at the last business day of December, exceeds a cumulative hurdle (calculated in relation to each year's opening Net Asset Value per share), multiplied by the number of shares in issue at 31 December. The performance fee is payable in the form of ordinary shares or cash. At 30 June 2024 no accrual has been made for the performance fee. |
|  | Carried interest            | 0.00% | This product does not charge any carried interest   |

All costs will vary from year to year. The biggest element of cost is the fee to the Investment Manager. This is calculated on the NAV at 30 June and 31 December so the average in any year will depend on the NAVs at those dates.

### How long should I hold it and can I take money out early?

#### Recommended required minimum holding period: 5 years

If an investor acquires newly issued shares in the Company they need to keep their investment for at least five years in order to retain the income tax relief on that investment. Whilst shares in the Company can be sold at any time, any sale within five years of the initial investment will trigger a clawback of the initial income tax relief. Because of this, and the Company's long-term investment horizon, the recommended holding period is at least five years. Even though the purchase of shares on the open market does not attract income tax relief the recommended holding period is five years due to the Company's long-term investment horizon.

Disinvestment is possible at any time by selling your shares in the Company. While the Company's shares are traded on the London Stock Exchange and the Company currently operates a buyback facility, the market for the Company's shares is less liquid than for many other listed companies. The Company's shares normally trade at a discount to its NAV. The majority of the Company's investments are in small, unquoted companies and therefore it may not be possible to realise these in a short period of time and the Company may not always be able to realise the maximum value of its investments in an accelerated sales process. There are no additional fees or penalties incurred for disinvestment.

### How can I complain?

If you're not happy with the service we give you, please tell us. We'll consider your complaint and acknowledge it in writing, setting out how we plan to deal with it. If you want to make a complaint, please email: [tracey.nice@yfmeq.com](mailto:tracey.nice@yfmeq.com), call us on +44 (0) 113 208 2646 or write to us at British Smaller Companies VCT2 plc, 4th Floor, 2 Bond Court, Leeds LS1 2JZ.
